

# BI Office

Release Notes 6.50

- A. Overview ..... 3
- B. Installation ..... 3
- C. Issues Addressed ..... 4
- D. Documentation ..... 5

# A. Overview

---

Version 6.50 addresses issues found in prior versions.

**The 6.50 installer can be used to upgrade all versions of BI Office 4.x, 5.x, and 6.x.**

# B. Installation

---

## **BEFORE INSTALLING, PLEASE READ THE FOLLOWING DIRECTIONS.**

- BEFORE applying any upgrade, administrators are STRONGLY ENCOURAGED to back-up the Pyramid content store database.
- The installer must also be installed with administrative privileges by an administrator.

### Directions for Full Installer

- Run the **Launcher.exe** file on the ISO installation media file.  
To use the ISO installation file, perform one of the following:
  - Mount the ISO file and install the contents on the virtual drive.
  - Burn a copy of the ISO file to a DVD or CD-ROM disc.
  - Extract the ISO to a local directory.
- The upgrade process **MUST** be done across all servers hosting the same instance of the platform.

If you are unsure of the correct course of action, please contact Pyramid Support for assistance.

### Deployment Wizard

Once the installation has been applied, the administrator will be presented with the Deployment Wizard. The administrator must complete the entire wizard to apply the upgrade successfully.

If you are prompted to reboot the server, restart **AFTER** you have run the deployment wizard.

## C. Issues Addressed

TOOL	DESCRIPTION
Environment	<ul style="list-style-type: none"> <li>• <b>Communication Tier:</b> Fixed an issue in the Microsoft .NET WCF communication framework, where performance was uneven when placed under heavy loads</li> <li>• <b>Load balancing:</b> Fixed an issue where the failover mechanism did not engage in a timely manner</li> <li>• <b>Login:</b> Fixed a login issue after an upgrade from version 6.44 Fixed a forms login authentication issue</li> <li>• <b>Cache:</b> Fixed a caching issue, where changes in a storyboard appeared to be unsaved Fixed a Query Cache issue when using KPI gauges Fixed an issue where editing of a KPI or Gauge style did not take effect when caching was on Fixed an issue where a role change did not take effect in HTML5 due to a caching problem</li> <li>• <b>Security:</b> Added TLS/SSL 1.2 support.</li> </ul>
Data Discovery	<ul style="list-style-type: none"> <li>• Fixed an issue where instead of the default theme, an incorrect one was being saved when creating a new book</li> <li>• Fixed an issue where outside data labels were cut off on Bar Charts</li> <li>• Fixed an issue where a gauge component shows an incorrect value for the Target when using a Dutch UI language</li> <li>• Fixed a font size mismatch where font sizes of some chart labels are different than other labels although all labels are configured the same</li> <li>• Fixed an issue where an error message appeared after right clicking on a chart legend</li> <li>• Fixed an issue where subtotals were shown with grand total data in a specific scenario</li> <li>• Fixed an issue where selecting descendants/children of a parameter throws an error</li> <li>• Fixed an issue where cubes did not appear in the list when one of the cubes in the data source was corrupted</li> <li>• Fixed an issue where a slicer didn't work when a book was opened from a link</li> </ul>
Storyboard	<ul style="list-style-type: none"> <li>• Fixed an issue where a slicer was not populated with data when the storyboard was opened from a link</li> <li>• Fixed an issue where a variable's default selection was shown as the variable name</li> <li>• Fixed a Conditional Display issue when using a variable</li> </ul>
Publication	<ul style="list-style-type: none"> <li>• Fixed a font formatting issue with TOC</li> <li>• Fixed an issue where the browser became unresponsive after making a modification in a publication</li> <li>• Fixed an issue where an error appeared after clicking a jump button</li> </ul>
