**Using Filters in Present to Improve** Performance

## Copy Content (version 2020.26)

Aside from the ability to export data from Discover, there is also an ability to be able to copy data from report to spreadsheet, to share either raw data or the visual that comes from Pyramid.

Start with a simple matrix report in Discover. To copy content, right click on the canvas, right outside of the grid.

Columns	: <b>k</b>	Count by Territory and Role

#### TIP 2

## **Using Filters in Present to Improve Performance**

There are times that we need to be able to provide a vast amount of data as a framework that multiple users, with different requirements, need to be able to use. We do this by making tons of data available within dashboards, and be able to filter the data so end-users can get exactly what they need with more flexibility using filters.

However, each time a filter is used, a query runs behind the scenes to filter the report—and when we're working with many filters, filtering a large dataset, this can yield less than optimal dashboard performance as it may require to run multiple queries at a time to get the final result set. To improve performance, we can resolve this by creating a separate page containing filters, that then runs the main dashboard page containing data, after filters have been picked.

- Create a new present dashboard with 2 slides. Name them Filter Slide and Content Slide.
- 2 Turn off Navigation Options. This will ensure that filter selections are made first before running the dashboard. Go to the Content Master Page by clicking on "Content" within the slide panel. Within here, go to navigation options in the present ribbon at the top. Go to Navigation Options > None.

Add an action to the button, that when a user clicks, it then goes to the slide with the report details in the dashboard. Right click on button > Click Action, which shows the Jump Actions Panel below. Select Jump to Slide > Content Slide (created in step 1) > Apply

Add Discover object with your detail report in your Content Slide from the Content Panel.

- Add the interaction between slicers and report object in Content Slide. Go to Present Tab > Interaction Manager. Within Interaction Manger, select "hidden slicers" at the top right of the wizard. Define the interaction between slicers and the report object.
- 8 Run the dashboard starting with filters page. Choose your filters and click the "Run Report Button", which will then open the content slide with your report.
